</table>

1 Includes Atlantic triton's trumpet (Charonia variegata), cameo helmet (Cassis madagascarensis), green star shell (Astrea tuber), hawkwing conch (Strombus raninus), milk conch (Strombus costatus), roostertail conch (Strombus gallus), true tulip (Fasciolaria tulipa), and West Indian fighting conch (Strombus pugilis).
2 All queen conch commercially and recreationally harvested from the EEZ landed consistent with management measures set forth in the Queen Conch FMP under a goal of allowing 20% of the spawning stock biomass to remain intact.
3 Values derived from average landings from Puerto Rico only for 1998-2000 (Ojeda-Serrano et al. 2001). Landings are in number of fish.
4 Value cannot be defined due to lack of a long-time series of landings data.
5 Includes all stocks in the Coral FMP except stony corals, octocorals, live-rock, and seagrasses.
